personal@saurabhagat.me https://saurabhagat.me +91-9370622127

Frontend-heavy Full-Stack Engineer with 6+ years of experience building scalable web applications and backend solutions.

With experience in frontend architecture, CI/CD, cloud infrastructure & migration, API development, automation, and productivity tooling across enterprise environments.

Worked in various business domains, including Financial Risk Management, Regulatory Compliance, Automation & Sustainability, creating end-to-end systems, enhancing productivity using innovative tools, and streamlining workflows with DevOps.

Education

Bachelor of Engineering in Computer Science
Mumbai University
Year 2019

Skills

Frontend	Backend	Cloud/DevOps
React	Java	Azure
Vue	NodeJS	Firebase
TypeScript	GoLang	Bicep
JavaScript	Spring	Kubernetes
HTML/CSS	NestJS	Linux

Tools

Figma	NPM	Vite
Postman	Docker	Maven
SonarQube	Vite	Graphana

Other technologies

Redis	Kafka	PostgreSQL
Playwright	NATS	RabbitMQ

Achievements

2016
CodeVita Contest
Global Rank
1188/166,000

2018
DigiFest Hackathon
Merit

2019
Smart India Hackathon
Amadeus IT Group
Finalist

2021 & 2022
Special Initiative Award

2023
Commitment Award

Work Experience

Frontend Engineer

Tata Consultancy Services, June 2019 – Present

- Led migration of a legacy frontend to Vue, achieving >95% test coverage with a robust functional test suite.
- Modernized build system by migrating to Vite, significantly reducing build times.
- Contributed to a centralized design system, improving component reusability, consistency, and maintainability across applications.
- Designed and implemented a functional test suite (TestCafe) integrated with CI/CD, substantially reducing manual regression effort.
- Produced high-fidelity UI mock-ups and static designs, enabling rapid iteration through continuous stakeholder feedback.
- Led modernization initiative: Node.js upgrades, state management (Pinia), and adoption of Composition API, improving maintainability and developer experience.
- Optimized frontend performance by resolving tree-shaking issues, code splitting, and enabling gzip compression, improving Web Vitals (LCP) by ~20%.
- Mentored other developers and conducted internal sessions on React, Vue & Micro-frontends, accelerating team capability.
- Designed & implemented a business workflow solution involving dynamic multi-paged, multi-step forms using schema-driven form engine with extensible validation rules.
- Architected a module federation system for 4 interdependent SPAs, reducing code duplication, improving deployments & simplified team collaboration.

Backend Developer & DevOps Engineer

- Migrated 2 applications from on-prem/cloud to Azure setup, including private networking, database, routing, hosting & serverless.
- Built an end-to-end API automation framework using Postman/Newman with AuthN/AuthZ flows and CI/CD integration.
- Developed a reusable Infrastructure-as-Code (IaC) library using Bicep, with automated versioning pipelines.
- Designed and maintained various Spring Boot services (Kafka consumers, batch jobs, REST APIs).
- Implemented application monitoring and alerting (metrics dashboards, automated incident triggers), improving observability and response times.
- Delivered multiple Azure automation solutions (network provisioning, Key Vault artifact rotation, DevOps pipelines), reducing manual ops overhead.
- Built a serverless ETL pipeline using Node.js and Azure Functions for scalable data processing.
- Reduced infrastructure costs by ~50% through workload analysis and right-sizing of cloud resources.
- Improved developer experience by introducing Docker-based environments for complex local testing setups and reproducibility.
- Developed database migration tooling in Java, including a semantic analyzer and automated documentation generator.

Side Projects

FlowConnect

Vue, TypeScript

A zero-dependency, highly customizable framework for creating node-based editors.

HiDE

React, TypeScript, NodeJS, Java, GoLang

A cloud platform with real-time collaborative tools for prototyping on provisioned Linux workspaces.

Percept

React, TypeScript

A plugin-extensible HTML5 canvas rendering engine.
