Portfolio: <https://saurabhagat.dev>

Frontend-heavy Senior Full Stack Engineer with 7 years of experience building software systems, backend solutions, and leading architecture-driven frontend initiatives across Agile enterprise environments. Specialized in Vue, React, Java, Spring, and cloud-native engineering, with a strong focus on frontend architecture, developer productivity, and operational maintainability. Experienced in designing scalable applications and improving development workflows. Independent open source contributor with interest in frontend, backend, and tooling ecosystems.

Work Experience

Full Stack / DevOps Engineer

Tata Consultancy Services (for a major Banking Provider in The Netherlands)

Sep 2020 – Present

- Led a team of 4 engineers in the design and implementation of a schema-driven form engine supporting dynamic multi-page and multi-step workflows.
- Optimized performance through tree-shaking fixes, code splitting, and enabling gzip compression, improving Web Vital (LCP) by ~20% from 2.9 to 2.3 seconds.
- Provided technical oversight for major features and structural refactoring as a primary code reviewer enforcing organizational standards and security practices.
- Implemented a CI-integrated Playwright end-to-end test suite, automating critical regression workflows, eliminating 2-3 hours of manual validation per release cycle.
- Mentored 2 teams and conducted workshops on advanced React, Vue.js, and micro-frontend software architecture, accelerating team capability.
- Overhauled legacy build systems by migrating to Vite, reducing build times from 22 minutes to under 14 minutes.
- Architected a module federation system for 4 interdependent Vue.js SPAs, reducing duplication, streamlining deployments, and simplifying collaboration.
- Designed and maintained Java components including Spring Boot microservices (Kafka consumers, Batch jobs, RESTful APIs, and shared libraries).
- Built a serverless ETL pipeline using Node.js, Azure Functions, and Event Grid, processing ~150K records per execution.
- Developed Java-based database migration tooling including a semantic analyzer and automated documentation generator.
- Migrated 2 on-premises systems to Azure, including private networking, Azure SQL, Application Gateway routing, storage, Key Vault, hosting, horizontal scaling and serverless infrastructure.
- Developed a modular Infrastructure-as-Code (IaC) library using Bicep, with technical documentation, automated versioning and continuous deployment.
- Reduced infrastructure costs by ~50% from ~€2.1K/month through workload analysis and cloud resource right-sizing.

Frontend Engineer

Jun 2019 – Sep 2020

- Led migration of a legacy Angular frontend to Vue.js, integrating a centralized design system and achieving >90% functional test coverage using TestCafe.
- Delivered 4 major customer-facing features and workflow modules while evolving the component architecture for maintainability.
- Redesigned client-side API batching behaviour to eliminate up to 3 sequential waterfall requests, reducing frontend load times and improving responsiveness.
- Owned and developed 2 components in a proprietary design system, driving UI standardization and cross-team reusability.

Education

Bachelor of Engineering, Computer Science

University of Mumbai, Aug 2015 – Mar 2019

Skills

Frontend: Vue, React, TypeScript, JavaScript, HTML5, CSS3, Tailwind, Vite, Playwright

Backend: Java, Go, Node.js, Spring, Express.js, NestJS

Cloud & DevOps: Azure, Bicep, Linux, Kubernetes

Other Technologies: Git, Postman, Maven, Docker, Grafana, SonarQube, Redis, Kafka, PostgreSQL, Figma

Achievements & Certifications

2016 CodeVita Contest – Global Rank 1188/166K

2019 Smart India Hackathon – Finalist

2020 Microsoft Certified: Azure Fundamentals

Side Projects

HiDE – React, TypeScript, Node.js, Java, Go: A cloud IDE platform with real-time collaboration for prototyping on ephemeral Linux workspaces.

FlowConnect – Vue, TypeScript: A zero-dependency, highly customizable framework for creating node-based editors.

Percept – React, TypeScript: A plugin-extensible HTML5 rendering engine with an online playground.
