🐙 <https://github.com/bhagatsaurabh>

I am a Frontend-heavy Full Stack Engineer with 7 years of experience building scalable web applications, backend systems, and cloud solutions.

With experience in frontend architecture, API development, middleware systems, CI/CD, cloud infrastructure & solutioning, automation, and productivity tooling across enterprise environments.

Worked in various business domains, creating and owning end-to-end systems, developing innovative tools for enhanced productivity, and implementing effective DevOps processes to streamline workflows.

Education

🎓 **Bachelor of Engineering**
Computer Science
Mumbai University
Year 2015-2019

Skills

Frontend	Backend	Cloud/DevOps
⚛️ React	☕ Java	☁️ Azure
👁️ Vue	📦 NodeJS	🔥 Firebase
📄 TypeScript	🌀 GoLang	🦾 Bicep
📄 JavaScript	🌀 Spring	🌐 Kubernetes
📄 HTML/CSS	🌀 NestJS	🐧 Linux

Tools

🎨 Figma	📦 NPM	💎 Vite
🔍 Postman	🐳 Docker	🦉 Maven
🔍 SonarQube	🦋 Vite	📊 Grafana

Other technologies

📦 Redis	🌐 Kafka	🐘 PostgreSQL
🎭 Playwright	📡 NATS	🐼 RabbitMQ

Achievements

● 2016 CodeVita Contest Global Rank 1188/166,000	● 2021 & 2022 Special Initiative Award
● 2018 DigiFest Hackathon Merit	● 2023 Commitment Award
● 2019 Smart India Hackathon Amadeus IT Group Finalist	

Work Experience

tcs Frontend Engineer

🏢 Tata Consultancy Services (for a major Banking Provider in The Netherlands)
June 2019 – Present

- Designed & implemented a schema-driven form engine as a business workflow solution involving dynamic multi-page and multi-step forms.
- Led migration of a legacy frontend to Vue, achieving >90% test coverage with a robust functional test suite.
- Optimized frontend performance by resolving tree-shaking issues, code splitting, and enabling gzip compression, improving Web Vitals by ~20%.
- Contributed to a centralized design system, improving component reusability, consistency, and maintainability across applications.
- Designed and implemented a functional test suite (Playwright) integrated with CI/CD, substantially reducing manual regression effort.
- Produced high-fidelity UI mock-ups and static designs, enabling rapid iteration through continuous stakeholder feedback.
- Led modernization initiative: Node.js upgrades, state management, and adoption of composition-based logic, improving maintainability and developer experience.
- Mentored other developers and conducted sessions on React, Vue & Micro-frontends, accelerating team capability.
- Modernized build system by migrating to Vite, significantly reducing build times.
- Architected a module federation system for 4 interdependent SPAs, reducing code duplication, improving deployments & simplifying team collaboration.

Backend Developer & DevOps Engineer

- Designed and maintained various Spring Boot micro-services (Kafka, Batch, APIs, and standalone components/libraries).
- Delivered multiple Azure solutions (network provisioning, Key Vault artifact rotation, DevOps pipelines), reducing manual ops overhead.
- Upgraded 2 applications to Azure setup, including private networking, database, routing, hosting & serverless.
- Built an end-to-end API testing framework using Postman (Newman) with CI/CD integration.
- Developed an Infrastructure-as-Code (IaC) modular library using Bicep, with automated versioning pipelines.
- Implemented application monitoring and alerting (metrics dashboards, automated incident triggers), improving observability and response times.
- Built a serverless ETL pipeline using Node.js and Azure Functions for scalable data processing.
- Reduced infrastructure costs by ~50% through workload analysis and right-sizing of cloud resources.
- Improved developer experience by setting up complete Docker-based environments for complex local testing setups, achieving absolute reproducibility.
- Developed database migration tooling in Java, including a semantic analyzer and an automated documentation generator.

Side Projects

FlowConnect

Vue, TypeScript

A zero-dependency, highly customizable framework for creating node-based editors.

HiDe

React, TypeScript, NodeJS, Java, GoLang

A cloud platform with real-time collaborative tools for prototyping on provisioned Linux workspaces.

Percept

React, TypeScript

A plugin-extensible HTML5 canvas rendering engine.
